

Raptor has entered into strategic alliances and/or 'teaming agreements' with a number of the world's leading providers of security applications, software and equipment. Among these companies are:

- ▶ Avigilon: Avigilon designs, manufactures, and markets award-winning HD surveillance systems. The performance and value leader, Avigilon's solutions protect and monitor thousands of customer sites in more than 60 countries around the world. Avigilon Control Center, the world's first open HD Network Video Management Software platform, and megapixel cameras deliver full situational awareness and actionable image detail. Campuses, transportation systems, healthcare providers, public venues, infrastructure, and manufacturing sites with security, safety validation, and compliance requirements all benefit from reduced investigation time and more successful investigations by immediately producing indisputable video evidence. Avigilon earned Frost & Sullivan's HD Surveillance Company of the Year award in 2009 and the Frost & Sullivan Award for New Product Innovation in 2010. (www.avigilon.com)
- ▶ Integra-Security Alliance, Inc.: is a distinctive and acclaimed security alliance/consultant service. The company has earned the support and endorsement from government, law enforcement and industry. Integra Security Alliance was established in 2003 by Tony Ramos following 25-years of private security experience, most recently Corporate Security Director for Carson Pirie Scott and Vice President of Sales for USMA a Division of USIS. Initially a consulting service offering experience, proven solutions and extensive resources to companies, soon expanded offering much more. Today, our alliance is comprised of seven core companies offering services which include employee background services, drug testing, burglary/fire systems, card access, video surveillance systems, biometrics, nurse call systems, infant anti-abduction systems, uniform security officers, investigations, training and legal HR consulting services for employers. Each of these companies is a recognized leader in their respective industries with a strong commitment to service, quality and customization. Additionally, we offer a second-tier of resources offering services such as computer forensics, disaster recovery, data networking and a design group capable of new product design and manufacturing specializing in RFID technology and bio-metric identification. (www.integrasecurity.org).
- ▶ Eclipse Identity Recognition Corporation (EclipseIR) designs, develops, and sells video analytics technologies specifically geared toward the "Intelligent Security Industry." The technology incorporates advanced facial detection, biometric search and identity recognition techniques to identify individuals from live and stored video streams. Designed for intelligent surveillance and analysis in the real, "imperfect world," where video quality may be less than optimal, EclipseIR technology displaces current competitive approaches and opens new applications where video analytics and effective identity recognition have not been attainable. EclipseIR has repeatedly demonstrated its expertise in deploying Video Analytics. The company partners with companies specializing in "best of breed" analytics such as object tracking, people tracking, and behavior analysis to provide the customer a total intelligent security solution. The EclipseIR has developed its proprietary recognition engines for analysis of multiple video streams to identify "persons of interest" by biometric

and personal characteristics. Driven primarily by the requirements of law enforcement and intelligent security, EclipseIR has developed a world-class Facial Detection Engine. The key differentiator is the ability to detect facial and identity characteristics in adverse video conditions, due to low-quality cameras, poor lighting, moving subjects, and partially visible faces. Moreover, the engine can detect multiple faces within a single frame. The Identity Recognition Engine works in conjunction with the Facial Detection Engine, to rapidly search databases of existing faces, to identify individuals. Enhanced technology modules add sophisticated video analysis and search capabilities for forensic applications in law enforcement, military, homeland security and public safety. In addition to determining identity, this powerful engine can track individuals through the video stream, thereby revealing patterns of activity. Using biometric analytics, the EclipseIR technology provides the ability to search video streams to locate individuals based on personal characteristics, such as face color, height, and upper and lower body (clothes) color. (www.eclipseir.com)

- ▶ SAIC: is a Fortune 500 scientific, engineering and technology applications company that uses its deep domain knowledge to solve problems of vital importance to the nation and the world, in national security, energy and the environment, critical infrastructure, and health. Raptor is working with SAIC on a number of projects that have the potential of utilizing a wide range of Raptor's offerings, including the SITE MAST-R, Zee-Stake and associated video surveillance and perimeter security systems on a worldwide basis. In return Raptor has access to SAIC's extensive portfolio of security sensors, radiation scanners, chemical and bomb detection systems, license plate recognition systems and facial recognition software. The association with an internationally known company, with the stature of SAIC, validates the potential of the technology-based products and services Raptor is developing for the homeland security marketplace. (www.saic.com)
- ▶ ACG Security Group: ACG Security Group Corp. develops and manufactures non-lethal security products for public and private agencies. ACG Security Group Corp. also provides intelligence analysis for public access, private clients and policing agencies. The ECS® Detector line, built on our proven technology, is the basis of our new line explosive sensing devices. The ECS® Detectors are designed to sense and assist in the detection and monitoring of bomb and Class One explosive materials with over 1000% more sensitivity than other products currently available. Explosive signatures recorded include those contained on the published list of regulated explosive materials as presented by the USATF and United Nations. (www.securenet.bc.ca)
- ▶ Green Horizon Manufacturing LLC: of San Francisco, California is an emerging leader in on-demand, self-sustaining housing and commercial facility solutions. Raptor has teamed with Green Horizon to produce a line of easily transportable, rapidly deployable, yet highly secure man-camp, forward operating base and border crossing facility systems. Structures can be transported on an integrated light-duty trailer system, or retracted to fit into a worldwide standard, 40' high-cube, and marine container for shipment by truck, rail or sea. The systems can be equipped with a large selection of life support, communications and security options that make these modular units the best of breed in the area of rapidly deployed man-camps. (www.greenhorizonmfg.com)
- ▶ Hinman Consulting Engineers: Hinman, based in San Francisco, CA is a leading engineering consultancy specializing in protecting people, operations, and property against structural damage caused by explosions, earthquakes, and other natural and man-made

hazards. Hinman provides comprehensive, but user-friendly guidance toward reducing risks from potentially catastrophic events for mission-critical facilities, critical infrastructure, and high-profile buildings. Hinman's clients include federal, state, and local governments, quasi-governmental organizations, and Fortune 500 companies. Raptor has teamed with Hinman to provide security consulting services for the design and ongoing operations of high risk facilities. The most recent project is for the World Bank in Pakistan. (www.hce.com)

- ▶ **Hart Security Limited:** Hart is an internationally recognized risk management company delivering innovative, integrated solutions across land, sea and air. Hart's integrated solutions cover a broad range of business facilitation including intelligence, physical security, logistics, medical support, manpower, training and equipment. Hart can provide a variety of turn-key solutions to enable comprehensive business operations. Hart combines detailed knowledge of security methods and governmental regulations with an understanding of the commercial realities that shape clients' requirements. Clients include governments, corporations, humanitarian and non-governmental organizations (NGOs). (www.hartsecurity.com)
- ▶ **Reed Incorporated:** Reed Incorporated is a protective security business headquartered in Northern Virginia with operations worldwide. Reed provides professional and reliable security, training, logistics, construction management, and project management support to our clients worldwide, specializing in operations in remote, third world, multi-cultural, and high-risk geographical environments. Reed's diverse teams, chosen from its worldwide network of highly skilled and experienced specialists including many former military Special Forces and law enforcement personnel, are tailored to meet our clients' needs and to suit the particular requirements of individual client projects. Reed is one of Raptor's third-party protective security partners. (www.reedinc.com)
- ▶ **Redline Communications:** Redline Communications is a global producer of specialized outdoor wireless broadband radio systems that allow companies and governments to quickly, easily and securely roll out or extend networked services and applications over almost any distance. Powerful, versatile, and reliable Redline systems deliver wireless video surveillance and secure private network solutions; digital oil field and SCADA/Video/Voice/Data network solutions; backhaul and business Internet access solutions. Redline customers include some of the world's largest oil and gas organizations, telecom service providers, military organizations and local and municipal government. (www.redlinecommunications.com)
- ▶ **WaveTeq Communications:** is a Kelowna, British Columbia wireless equipment manufacturer specializing in Wi-Fi and WiMAX products operating in extreme conditions. WaveTeq's dual radio design allows both point-to-point and multi-point distribution from a single platform. The systems require very little power and can be powered by a wide range of alternative energy sources including solar and wind power. WaveTeq is teaming with Raptor to collectively develop and deploy SITE MAST-R and Z-Stake video surveillance, perimeter security and communications products. In addition, WaveTeq and Raptor have established a relationship whereby they team on certain perimeter security, video surveillance and telecom infrastructure projects, where WaveTeq's engineering expertise in these areas can aid in the design and deployment of complex security systems. (www.waveteq.com)

-
- ▶ Intelligent Software Solutions (ISS): is a Colorado Springs, Colorado corporation that specializes in the integration, analysis and visualization of data for public safety, transportation, military and high-end enterprise applications. The ISS 'WebTAS' platform is deployed as part of the Raptor-IMS system as an enhancement to video surveillance and threat assessment management, by providing a platform to acquire, analyze and distribute data from various road-side sources (sensors, cameras, etc.). The 'refined' data is available to Raptor clients as a value-added feature of the company's core business in the homeland security sector. (www.issinc.com)
 - ▶ EmerGeo: is a Vancouver, British Columbia corporation that specializes in emergency management and GIS solutions to customers on a worldwide basis. EmerGeo 'Fusionpoint™' delivers a single unified view of critical data to those who need it - regardless of what information systems they have invested in. EmerGeo's unique managed Common Operating Picture (mCOP™) technology, based on open standards, provides reliable world-class risk management technology and professional services that are proven effective in helping government and industry to mitigate, prepare for, respond to and recover from emergencies, natural disasters, acts of terrorism, and planned events. (www.emergeo.com)
 - ▶ Federal Signal: Federal Signal Corporation (NYSE: FSS) enhances the safety, security and well-being of communities and workplaces around the world. Founded in 1901, Federal Signal is a leading global designer and manufacturer of products and total solutions that serve municipal, governmental, industrial and institutional customers. Raptor is working with FSS' newly formed Federal Technology Group to partner with it in the implementation of Federal's license plate recognition (LPR) system, which is an industry leader dominating over 80% of the market. (www.federalsignal.com)

In addition to its strategic partnerships, Raptor has distributor arrangements with a large number of security and telecom manufacturers of cameras, sensors, applications, software and support equipment.

Contact Information

Raptor provides end-to-end security technology solutions for homeland security, military, energy, maritime, transportation and enterprise applications. For more information about **Raptor Global Services, Inc.**, please visit our website at www.raptorglobalinc.com or contact:
