

## Security and Safety Solutions and Services for Refineries

**Raptor Global Services, Inc.** provides the highest quality security and safety solutions, in high-risk situations, at cost-effective prices. The company provides both sophisticated security technology, as well as advanced protective security services, designed to provide an end-to-end 'solutions-driven' package of security applications, products and services. Many of Raptor's products and services were originally designed for use by the US Department of Defense, and are in use by security agencies around the globe.

Oil refineries worldwide are particularly vulnerable to threats from terrorism, government instability or criminal activities. As such, Raptor has prepared a comprehensive package of applications, products and services for this industry. Raptor's 'holistic' approach to supporting security for refineries begins with the needs assessment, and continues through to the implementation of an effective security and safety program for the facility and its personnel.

Raptor leverages its experience in Iraq, Afghanistan, and other high threat environments to validate its approach in safe guarding their clients' assets. Regardless of facility or asset, Raptor uses the defense in depth or layer defense to mitigate the client's risk. This is broken down into physical, technical, and administrative controls as well as program development and maintenance. Experience and history shows that the threat continues to evolve, Raptor's approach to securing its clients' assets adapts to these changes in the environment.

### Raptor Advanced Security Technology

Raptor's advanced security technology group can provide a comprehensive package of security and safety services for refineries that supports a wide variety of perimeter security, facility monitoring, personnel status and asset recovery applications. This includes:

- ▶ Ascertainment of security and safety needs
- ▶ Security system design
- ▶ Biometric and 'tamper-proof' access systems
- ▶ High-resolution, infrared and starlight video surveillance systems
- ▶ Asset control and personnel tracking and monitoring
- ▶ Multi-zone/layer perimeter monitoring and virtual fences
- ▶ Secure SCADA and DCS systems
- ▶ Equipment installation and testing
- ▶ Operations, maintenance and training support

### Raptor Security Support Services

In addition to Raptor's extensive portfolio of technology-based security products, applications and services the company also offers a broad selection of security and safety support services. Raptor can bring to bear the resources of its highly qualified strategic partners, to work with its clients to provide a comprehensive assessment of real and perceived potential security threats.

---

These services include:

- ▶ Security consulting
- ▶ Threat assessment
- ▶ Security training
- ▶ Critical infrastructure, facility and residential protection
- ▶ Crisis action management and training
- ▶ Disaster recovery

In addition, Raptor Security Support Services personnel can provide some of the most comprehensive security training available in the areas of:

- ▶ Personal protection
- ▶ Perimeter and facility guard training
- ▶ Counter terrorism tactics
- ▶ Counter insurgency techniques
- ▶ Surveillance and Counter-surveillance training
- ▶ Force protection training

Raptor Security Support Services personnel are:

- ▶ Highly-trained professionals with years of military special operations and security sector experience.
- ▶ Specially trained in threat collection, analysis, interpretation of local conditions, and identifying and analyzing the profiles of potential adversaries.
- ▶ Experienced in identifying the nature and magnitude of threats that may exist in a facility, perimeter or border security situation.

## Raptor's Partners

Raptor is fortunate to have alliances with some of the world's foremost providers of security and safety products, applications and services. These partners are prepared to support Raptor projects on a worldwide basis. Included in this group are:

- ▶ Avigilant: one of the world's largest providers of security cameras and support equipment for military, government and large enterprise applications,
- ▶ Datacom: a provider of communications, safety and security applications and services for the energy industry.
- ▶ EmerGeo is a British Columbia corporation that specializes in emergency management and GIS solutions to customers on a worldwide basis.
- ▶ GlobalLogix: a leading provider of SCADA products, applications and services for the upstream and downstream energy sectors,
- ▶ Intelligent Software Solutions specializes in the integration, analysis and visualization of data for public safety, energy, military and high-end enterprise applications.
- ▶ SAIC: a Fortune 500 company and a leading defense contractor providing security products, services and solutions to government and enterprise customers worldwide.

Raptor's focus on the energy industry and its ability to draw on the resources of dozens of highly regarded security and safety product manufacturers, applications/service providers and specialized consulting firms gives Raptor a unique capability to support high-value projects.

---

## About Raptor Solutions

**Raptor Global Services, Inc.** provides a wide variety of security and telecom applications, products and services at cost-effective prices. The company provides sophisticated security technology supporting a wide variety of perimeter, facility and personnel safety solutions in high-risk situations, as well as advanced telecommunications products and applications designed to bring world-class voice, data and video services to remote and rural areas of emerging markets worldwide.

Raptor has formed strategic alliances with leading providers of protective security services, proprietary applications and advanced security hardware. These unique alliances are focused on insuring the safety of personnel, safeguarding critical facilities, tracking the whereabouts of assets and monitoring the movement of vehicles in hostile and high-risk environments.

Many of Raptor's security products and services were originally designed for use by the Department of Defense, and are in use by security agencies around the globe. Military versions of a number of these systems are in use today, supporting critical applications in hostile environments around the world.
